Mating Systems and Strategies - Stephen M. Shuster 2019-12-31

This book presents the first unified conceptual and statistical framework for understanding the evolution of reproductive strategies. Using the concept of the opportunity for sexual selection, the authors illustrate how and why sexual selection, though restricted to one sex and opposed in the other, is one of the strongest and fastest of all evolutionary forces. They offer a statistical framework for studying mating system evolution and apply it to patterns of alternative mating strategies. In doing so, they provide a method for quantifying how the strength of sexual selection is affected by the ecological and life history processes that influence females' spatial and temporal clustering and reproductive schedules. Directly challenging verbal evolutionary models that attempt to explain reproductive behavior without quantitative reference to evolutionary genetics, this book establishes a more solid theoretical foundation for the field. Among the weaknesses the authors find in the existing data is the

apparent ubiquity of condition-dependent mating tactics. They identify factors likely to contribute to the evolution of alternative mating strategies--which they argue are more common than generally believed--and illustrate how to measure the strength of selection acting on them. Lastly, they offer predictions on the covariation of mating systems and strategies, consider the underlying developmental biology behind male polyphenism, and propose directions for future research. Informed by genetics, this is a comprehensive and rigorous new approach to explaining mating systems and strategies that will influence a wide swath of evolutionary biology.

The Mating Season - P.G. Wodehouse 2009-10-06

_____ A Jeeves and Wooster novel 'It's hard to single out one book as the entire Jeeves and Wooster collection is Bach Rescue Remedy in literary form, but this tale of romantic imbroglia is a priceless hoot... Every sentence is a perfectly wrought delight.' Independent At Deverill Hall, an idyllic Tudor manor in the picture-perfect village of King's Deverill, impostors are in the air. The prime example is man-about-town Bertie Wooster, doing a good turn to Gussie Fink-Nottle by impersonating him while he enjoys fourteen days away from society after being caught taking an unscheduled dip in the fountains of Trafalgar Square. Bertie is of course one of nature's gentlemen, but the stakes are high: if all is revealed, there's a danger that Gussie's simpering fiancée Madeline may turn her wide eyes on Bertie instead. It's a brilliant plan - until Gussie himself turns up, imitating Bertram Wooster. After that, only the massive brain of Jeeves (himself in disguise) can set things right.

Early Modern Spain: A social History explores the solidarities which held the Spanish nation together at this time of conflict and change. The book studies the pattern of fellowship and patronage at the local level which contributed to the notable absence of popular revolts characteristic of other European countries at this time. It also analyses the Counter-Reformation, which transformed religious attitudes, and which had a huge impact on family life, social control and popular culture. Focusing on the main themes of the development of capitalism, the growth of the state and religious upheaval, this comprehensive social history sheds light on changes throughout Europe in the critical early modern period.

Mating Season - Jon Loomis 2010-04-27

Jon Loomis's sharp and witty debut, *High Season*, starring Detective Frank Coffin, a onetime Baltimore homicide detective who came back to his hometown after one too many grisly crime scenes started to take their toll, was one of *The Washington Post's* best mysteries of the year and an editor's choice title for *The New York Times Book Review*. Coffin had hoped that the move to Provincetown, Massachusetts, would put an end to his panic attacks, but so far, the quirky Cape Cod tourist town has been every bit as brutal as the big city. Now in Loomis's winning follow-up, Coffin has to get a grip in order to investigate the murder of one of the town's most "popular" women. Beautiful and the heir to a tremendous fortune, Kenji Sole had an active love life--a very active love life. When she's found stabbed to death on the floor of her bedroom dressed only in a negligee, it's clear someone very close to her is probably responsible. Since she didn't care about her many lovers' marital status, Frank and his partner Officer Lola Winters have their work cut out for them interviewing all of her lovers--not to mention their jealous wives---to find out who killed the much-sought-after Ms. Sole. With *Mating Season*, another wry and wickedly suspenseful mystery, Loomis continues to be one of crime fiction's most promising stars.

Mammalian Olfaction, Reproductive Processes, and Behavior - Richard Doty 2012-12-02

Mammalian Olfaction, Reproductive Processes, and Behavior presents the conceptual, methodological, and empirical advances in the study of the complex interactions between nasal chemoreception, sexual behavior, and endocrine function in mammals. It focuses on the orders Artiodactyla, Perissodactyla, Carnivora, Rodentia, and Primates. The book describes techniques for producing anosmia in laboratory animals

and the usefulness of the popular pheromone concept in describing chemosensory influences on mammalian behavior and endocrinology. It also reviews studies examining reproductive endocrine-olfactory interactions in humans. Moreover, the book discusses the anatomy, physiology, and development of the olfactory and vomeronasal systems. This book is invaluable to anatomists, endocrinologists, mammalogists, physiologists, psychologists, and zoologists not only as a source book, but as a textbook on chemosensation as well.

Monogamy - Ulrich H. Reichard 2003-09-11

Why do males of some species live with a single mate when they are capable of fertilizing more than one female's eggs? Why do some females pair only with one male, and not with several partners? Why do birds

usually live in pairs and feed chicks together whilst mammals often live in larger groups with females rearing their young without male help? These questions form the central theme of this book. Social monogamy is a complex, multi-faceted phenomenon that does not always correspond with reproductive monogamy, so a paired male may not necessarily be raising his own offspring. Exploring the variables influencing and maintaining the fascinating diversity of social, sexual and reproductive monogamous partnerships in birds, mammals and humans, this book provides clues to the biological roots of monogamy for students and researchers in behavioural ecology, evolutionary anthropology, primatology, zoology and ornithology.
