Teaching, Learning and Scaffolding in CLIL Science Classrooms - Yuen Yi Lo 2021-05-15

This edited volume presents a collection of empirical studies examining the teaching and learning processes in science classrooms in Content and Language Integrated Learning (CLIL) contexts. It is a timely contribution to the rapidly growing body of CLIL research in response to scholars' consistent calls for more classroom-based research on the issues in integration of content and language teaching in lessons. With the dual goal of content and language learning, students in CLIL programmes are also facing double challenges - mastery of abstract, cognitively demanding content knowledge and unfamiliar academic language.

Focusing on the notion of "scaffolding", this edited volume demonstrates how science teachers can provide appropriate and timely scaffolding for their students to overcome the challenges in CLIL science classrooms. With studies from different educational settings (Hong Kong, Mainland China, Singapore and Australia) and epistemological paradigms, and adopting a variety of research designs, this volume will provide key insights into CLIL pedagogy and teacher education. Originally published as special issue of *Journal of Immersion and Content-Based Language Education* 7:2 (2019).

The More-Than-Just-Surviving Handbook - Barbara Law 2010-05-14

This revised and expanded edition of the 1990 bestseller includes the latest research in language acquisition: how to teach reading and writing and how to develop listening and speaking skills. It is filled

with the authors' trademark anecdotes and practical advice, based on their many years of experience working with ELL students. Strategies for teaching the four literacy skills—reading, writing, speaking, and listening—are enhanced by student examples and illustrations. To help you personalize the theory discussed, each chapter includes a section with questions and case studies so you can apply the information to your own school and issues. In this new edition, you'll find great suggestions on how to - familiarize your ELL students with the school and classmates - measure reading, writing, speaking, and listening fluency - recognize and help students cope with culture shock - enrich your reading and writing programs - recognize the different needs of your students—with effective strategies for each level of literacy - teach language through content - help ELL students succeed in the content areas - tap the resources of your school and community

Differentiated Science Teaching - Keith Postlethwaite 1993

This is an exploration of the ways in which science teachers can respond appropriately to the whole range of pupils in their classes in mainstream schools. The author analyzes the nature of individual differences relevant to the science teacher, paying particular attention to learning difficulties and to high ability. He considers different kinds of response and specific tactics which can be deployed to help the range of pupils who find science difficult to learn, and to extend and enrich the science education of those who learn it with ease. He provides a theoretical framework for differentiated science teaching and practical proposals for effective classroom practice.

Why Knowledge Matters - E. D. Hirsch 2019-01-02

In *Why Knowledge Matters*, influential scholar E. D. Hirsch, Jr., addresses critical issues in contemporary education reform and shows how cherished truisms about education and child development have led to unintended and negative consequences. Hirsch, author of *The Knowledge Deficit*, draws on recent findings in neuroscience and data from France to provide new evidence for the argument that a carefully planned, knowledge-based elementary curriculum is essential to providing the foundations for children's life success and ensuring equal opportunity for students of all backgrounds. In the absence of a clear, common curriculum, Hirsch contends that tests are reduced to measuring skills rather than content, and that students from disadvantaged backgrounds cannot develop the knowledge base to support high achievement. Hirsch advocates for updated policies based on a set of ideas that are consistent with current cognitive science, developmental psychology, and social science. The book focuses on six persistent problems of recent US education: the over-testing of students; the scapegoating of teachers; the fadeout of preschool gains; the narrowing of the curriculum; the continued achievement gap between demographic groups; and the reliance on standards that are not linked to a rigorous curriculum. Hirsch examines evidence from the United States and other nations that a coherent, knowledge-based approach to schooling

has improved both achievement and equity wherever it has been instituted, supporting the argument that the most significant education reform and force for equality of opportunity and greater social cohesion is the reform of fundamental educational ideas. Why Knowledge Matters introduces a new generation of American educators to Hirsch's astute and passionate analysis.

Brain-powered Science - Thomas O'Brien 2010

The Most Dangerous Game - Richard Connell 2020-04-21

From one of America's most popular short story writers and an Academy Award nominee: the O. Henry Award-winning tale that inspired the movie *The Hunt*. A subject of mysterious rumors and superstition, the

deserted Caribbean Island was shrouded in an air of peril. To Sanger Rainsford, who fell off a yacht and washed up on its shores, the abandoned isle was a welcome paradise. But unknown to the big-game hunter, a predator lurked in its lush jungles—one more dangerous than any he had ever encountered: a human. First published in 1924, this suspenseful tale "has inspired serial killers, films and stirred controversy in schools. A century on, the story continues to thrill" (The Telegraph). "[A] tense, relentless story of man-against-man adventure, in which the hunter Sanger Rainsford learns, at the hands of General Zaroff, what it means to be hunted." —Criterion

The Graveyard Book - Neil Gaiman 2010-09-28

It takes a graveyard to raise a child. Nobody Owens, known as Bod, is a normal boy. He would be completely normal if he didn't live in a graveyard, being raised by ghosts, with a guardian who belongs to neither the world of the living nor the dead. There are adventures in the graveyard for a boy—an ancient Indigo Man, a gateway to the abandoned city of ghouls, the strange and terrible Sleer. But if Bod leaves the graveyard, he will be in danger from the man Jack—who has already killed Bod's family.

Concepts of Biology - Samantha Fowler 2018-01-07

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that

incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

The Way Up to Heaven (A Roald Dahl Short Story) - Roald Dahl 2012-09-13

The Way Up to Heaven is a brilliant gem of a short story from Roald Dahl, the master of the sting in the tail. In The Way Up to Heaven, Roald Dahl, one of the world's favourite authors, tells a sinister story about the darker side of human nature. Here, a woman obsessed with punctuality makes a fateful decision . . . The Way Up to Heaven is taken from the short story collection Kiss Kiss, which includes ten other devious and shocking stories, featuring the wife who pawns the mink coat from her lover with unexpected results; the priceless piece of furniture that is the subject of a deceitful bargain; a wronged woman taking revenge on her dead husband, and others. 'Unnerving bedtime stories, subtle, proficient, hair-raising and done to a turn.' (San Francisco Chronicle) This story is also available as a Penguin digital audio download read by Stephanie Beacham. Roald Dahl, the brilliant and worldwide acclaimed author of Charlie and the Chocolate Factory, James and the Giant Peach, Matilda, and many more classics for children, also wrote scores of short stories for adults. These delightfully disturbing tales have often been filmed and were most recently the inspiration for the West End play, Roald Dahl's Twisted Tales by Jeremy Dyson. Roald Dahl's stories continue to make readers shiver today.

Mitosis/Cytokinesis - Arthur Zimmerman 2012-12-02

Mitosis/Cytokinesis provides a comprehensive discussion of the various aspects of mitosis and cytokinesis, as studied from different points of view by various authors. The book summarizes work at different levels of organization, including phenomenological, molecular, genetic, and structural levels. The book is divided into three sections that cover the premeiotic and premitotic events; mitotic mechanisms and approaches to the study of mitosis; and mechanisms of cytokinesis. The authors used a uniform style in presenting the concepts by including an overview of the field, a main theme, and a conclusion so that a broad range of biologists could understand the concepts. This volume also explores the potential developments in the study of mitosis and cytokinesis, providing a background and perspective into research on mitosis and cytokinesis that will be invaluable to scientists and advanced students in cell biology. The book is an excellent reference for students, lecturers, and research professionals in cell biology, molecular biology, developmental biology, genetics, biochemistry, and physiology.

The Double Helix - James D. Watson 2011-08-16

The classic personal account of Watson and Crick's groundbreaking discovery of the structure of DNA, now with an introduction by Sylvia Nasar, author of A Beautiful Mind. By identifying the structure of DNA, the molecule of life, Francis Crick and James Watson revolutionized biochemistry and won themselves a Nobel Prize. At the time, Watson was only twenty-four, a young scientist hungry to make his mark. His uncompromisingly honest account of the heady days of their thrilling sprint against other world-class researchers to solve one of science's greatest mysteries gives a dazzlingly clear picture of a world of brilliant scientists with great gifts, very human ambitions, and bitter rivalries. With humility unspoiled by false modesty, Watson relates his and Crick's desperate efforts to beat Linus Pauling to the Holy Grail of

life sciences, the identification of the basic building block of life. Never has a scientist been so truthful in capturing in words the flavor of his work.

Gender & Censorship - Brinda Bose 2006

The debate on censorship in India has hinged primarily on two issues -- the depiction of sex in the various media, and the representation of events that could, potentially, lead to violent communal clashes. This volume traces the trajectory of debates by Indian feminists over the last 25 years around the issue of gender and censorship. Censorship was institutionalised by the colonial British government, and has remained a much-contested government institution. In a multicultural society with diverse tastes and moral

standards, who is to draw the line? And what reasonable curbs can be imposed on the freedom of expression? Can artistic merit be conflated with public good? Is the desire to purge the public arena of unnecessarily prurient and lascivious images actually in the interests of women and of society at large?
