The Consequences of Economic Rhetoric -
Arjo Klamer 1988

The papers in this volume are drawn from a recent conference at Wellesley College for both theoretical and applied economists, which explored the consequences of rhetoric and conversation within the field of economics.

Monetary Economics, Banking and Policy -
Penelope Hawkins 2022-12-19

This edited collection seeks to advance thinking on money and the monetary nature of the economy, macroeconomic analysis and economic

policy, setting it within the context of current scholarship and global socioeconomic concerns, and the crisis in the economics discipline. A key aim is to highlight the central contribution that Sheila Dow has made to these fields. Bringing together an impressive panel of contributors, this volume explores topics including central bank independence, liquidity preferences, money supply endogeneity, financial regulation, regional finance and public debt. The essays in this first collection of two will be thought-provoking reading for advanced students and scholars of macroeconomics, monetary economics, central banking and heterodox economics. Contributors have a broad range of professional experience at universities, central banks, business, development institutions and policy advisories.

Intellectual Path Dependence in Economics - Altug Yalcintas 2016-03-10

Is economics always self-corrective? Do erroneous theorems permanently disappear from the market of economic ideas? *Intellectual Path Dependence in Economics* argues that errors in economics are not always corrected. Although economists are often critical and open-minded, unfit explanations are nonetheless able to

reproduce themselves. The problem is that theorems sometimes survive the intellectual challenges in the market of economic ideas even when they are falsified or invalidated by criticism and an abundance of counter-evidence. A key question which often gets little or no attention is: why do economists not reject theories when they have been refuted by evidence and falsified by philosophical reasoning? This book explores the answer to this question by examining the phenomenon of intellectual path dependence in the history of economic thought. It argues that the key reason why economists do not reject refuted theories is the epistemic costs of starting to use new theories. Epistemic costs are primarily the costs of scarcity of the most valued element in academic production: time. Epistemic scarcity overwhelmingly dominates the evolution of scientific research in such a way that when researchers start off a new research project, they allocate time between replicable and un-

replicable research. This book is essential reading for anyone interested in the methodology, philosophy and history of economics.

International Handbook on the Economics of Integration - Miroslav N. Jovanović 2011-01-01
'International Handbook on the Economics of Integration' edited by Miroslav Jovanović provides timely and rich academic contributions to considerations of the widest array of integration-related issues. European integration has been providing an inspiration to a number of academics and researchers. The Handbook is a recognition of the dynamic and strong solidarity of European integration. At the same time, the European Union often provided an example for integration schemes throughout the world which spread enormously since the mid-1990s. Leading

experts from all continents contributed to this Handbook which will be a valuable input into academic and policy-making discussions and actions.' - José Manuel Barroso, President of the European Commission

What is Neoclassical Economics? - Jamie Morgan

2015-11-19

Despite some diversification modern economics still attracts a great deal of criticism. This is largely due to highly unrealistic assumptions underpinning economic theory, explanatory failure, poor policy framing, and a dubious focus on prediction. Many argue that flaws continue to owe much of their shortcomings to neoclassical economics. As a result, what we mean by neoclassical economics remains a significant issue. This collection addresses the issue from a new perspective, taking as its point of departure Tony Lawson's essay 'What is this 'school' called neoclassical economics?'. Few terms are as controversial for pluralist and heterodox economists as neoclassical economics. This controversy has many aspects because the term itself has different specifications and connotations. Within this multiplicity what we mean by neoclassical matters to pluralist and heterodox economists for two primary reasons. First, because it informs how we view and

critique the mainstream; second, because the relationship between heterodox and mainstream economics influences how heterodox economists model, apply methods and construct theory. The chapters in this collection each have different things to say about these matters, with contributions ranging across the work of key thinkers, such as Thorstein Veblen and Kenneth Arrow, applied issues of non-linear modelling of dynamic systems, and key events in the history of economics. This book will be of use to those interested in methodology, political economy, heterodoxy, and the history of economic thought. *Advances in Artificial Economics* - Charlotte Bruun 2007-05-19

This book is based on presentations at AE'2006 (Aalborg, Denmark) - the second symposium on Artificial Economics. As a new constructive simulation method, Agent-Based Computational Economics (ACE) has in recent years proven its strength and applicability. Coverage in this volume extends to well known questions of

economics, like the existence of market efficiency, and to questions raised by new analytical tools, for example networks of social interaction.

Oswaal CBSE One for All, Economics, Class 12 (For 2023 Exam) - Oswaal Editorial Board

The Historiography of Economics - A.W. Bob Coats 2013-10-08

This is the third and final volume of collected papers of A.W. Bob Coats. Coats began to collect material for this volume in the years following the publication of the second volume in 1993, but sadly died in 2007, before the work was completed. The volume has now been completed under the editorship of Roger Backhouse and Bruce Caldwell. Along with his articles, the compilation of the volume also reflects Coats' interest in and commitment to book reviews, a

selection of which have been chosen for inclusion. The book also includes a comprehensive bibliography. In addition to a preface by Backhouse and Caldwell, the volume also reproduces the obituary that was published in *History of Political Economy*, a memoir published in 1996, and an interview with Grant Fleming, published the previous year. Together, the introductory materials, articles and reviews serve as a fitting tribute to the body of work of Bob Coats.

New Frontiers of the Capability Approach - Flavio Comim 2018-10-25

Leading scholars from a range of disciplines contribute to an inclusive discussion of the latest techniques and issues examined by the capability approach. It will appeal to readers across academic backgrounds including development studies, economics, sociology, education, urban planning, political science, geography, public policy and management.

Intellectual Property, Competition Law and

Economics in Asia - R Ian McEwin 2011-10-07

This book results from a conference held in Singapore in September 2009 that brought together distinguished lawyers and economists to examine the differences and similarities in the intersection between intellectual property and competition laws in Asia. The prime focus was how best to balance these laws to improve economic welfare. Countries in Asia have different levels of development and experience with intellectual property and competition laws. Japan has the longest experience and now vigorously enforces both competition and intellectual property laws. Most other countries in Asia have only recently introduced intellectual property laws (due to the Trade-Related Aspects of Intellectual Property Rights (TRIPS) Agreement) and competition laws (sometimes due to the World Bank, International Monetary Fund or free trade agreements). It would be naïve to think that laws, even if similar on the surface, have the same goals or can be enforced

similarly. Countries have differing degrees of acceptance of these laws, different economic circumstances and differing legal and political institutions. To set the scene, Judge Doug Ginsburg, Greg Sidak, David Teece and Bill Kovacic look at the intersection of intellectual property and competition laws in the United States. Next are country chapters on Asia, each jointly authored by a lawyer and an economist. The country chapters outline the institutional background to the intersection in each country, discuss the policy underpinnings (theoretically as well as describing actual policy initiatives), analyse the case law in the area, and make policy prescriptions.

Law, Economics and Antitrust - Paddy McNutt 2005-01-01

. . . those who are dealing with antitrust issues the book is very useful and if somebody has already acquired the basic economic principles underlying antitrust regimes, one should read [this] book. . . Pal Bela Szilagyi and Dorina Juhasz, Erasmus Law and Economics Review The book is quite often an interesting read and provokes plenty of unexpected thoughts. . . Scholars familiar with the public choice literature and American antitrust law could benefit from the stimulating questions McNutt raises throughout and for the wealth of examples from European competition law. Scott E. Graves,

Downloaded from coconut.gov.lk on by guest

The Law and Politics Book Review Patrick McNutt's book is a brilliant exposé of the interaction between law, economics and antitrust. The author, an economist and distinguished regulator, handles both the legal and economic material deftly. It is provocative particularly when dealing with issues such as the efficiency of competition and the effectiveness of antitrust rules. His case-studies are particularly compelling. The book is written with huge flair and great learning. It combines theoretical and practical considerations. The comparative coverage is excellent. A "must-read" for all interested in law and economics. Antitrust specialists will discover many novel and valid insights. David O Keeffe, University College London, UK and College of Europe, Bruges, Belgium This book continually stimulates the reader to think about the issues in non-standard and illuminating ways, following new and significant directions. Yet the discussion always is authoritatively grounded in the author's

extensive knowledge of the pertinent law and the relevant economic analysis. William J. Baumol, New York University, US and Princeton University, US Professor McNutt provides a refreshing and different perspective on the important fundamental issues underlying competition law and policy. Barry E. Hawk, Skadden, Arps, Slate, Meagher & Flom LLP, US In this accessible yet rigorous textbook, Patrick McNutt presents a clear and refreshing approach to a wide range of topics in law, economics and antitrust. The issues covered include duty and obligation, contracting, liability, property rights, efficient entry, compensation, oligopoly pricing, issues in strategic antitrust and merger analysis. Using a selection of case studies where appropriate, and examples based in game theory, the book examines these issues from both a law and economics and a microeconomics perspective. Emphasis is placed on a thorough assessment of the economic and legal arguments, blending the

rigours of microeconomic analysis with common law standards. The analysis contained in the book will not only review, and indeed adapt neoclassical economic analysis but will also apply some of the methodology from the relatively new paradigm known as law and economics to many of the issues. The book also addresses the increasing overlap between emerging approaches in public choice and in law and economics. Practitioners in competition law and regulation of utilities will draw great value from this original and pertinent volume, as will scholars in the areas of regulation, competition law, competition policy and law and economics. *Priorities and Pathways in Services Reform – Part II* - Christopher Findlay 2013-10-10 Services markets remain highly regulated and international trade and investment is restricted. Previous works have identified the scope for significant gains from trade, yet those results are often debated and the progress on reform has been slow. Parts I and II in *Priorities and*

Pathways in Services Reform help fill the gap in the research around this debate. Part I — Quantitative Studies contains up-to-date assessment and evaluations of the impact of policy in a range of services markets in different countries (through cross-country modelling of the impacts of a reform program). Part II — Political Economy Studies builds on this to address the understanding of what makes a reform successful, going beyond a quantification of the benefits of reform. This book fills that gap by reporting and reviewing the experience of reform across different sectors and countries. Ten key lessons are identified for successful reform. Readers will find fresh insights into managing complex issues in services reform. You may also be interested in *Priorities and Pathways in Services Reform: Part I — Quantitative Studies*. Contents: Overview (Christopher Findlay) Telecommunications in Papua New Guinea (Ronald Duncan) Gas in Thailand (Deunden Nikomborirak) Electricity in

Post-Traditional Public Administration Theory - David John Farmer 2021-03-22

This book describes what is argued to be the most effective way of doing public administration thinking. Its aim is to encourage governments to govern fundamentally better in terms of policy and administration. A better understanding of context and identities, imaginization, epistemic pluralism, anti-administration, and the context of economics are examples of what is critical for high effectiveness. The pieces included in this book have been handpicked from the vast academic collection that David Farmer has authored over the last thirty years and which were published in the Journal of Administrative Theory and Praxis and the Journal of Public Administration Education. Collectively, these chapters are intended to help governments use post-traditional public administration theory in order to achieve better praxis.

Building Chicago Economics - Robert Van Horn 2011-10-17

Over the past forty years, economists associated with the University of Chicago have won more than one-third of the Nobel prizes awarded in their discipline and have been major influences on American public policy. *Building Chicago Economics* presents the first collective attempt

by social science historians to chart the rise and development of the Chicago School during the decades that followed the Second World War. Drawing on new research in published and archival sources, contributors examine the people, institutions and ideas that established the foundations for the success of Chicago economics and thereby positioned it as a powerful and controversial force in American political and intellectual life.
