Statistical Computation for Programmers,
Scientists, Quants, Excel Users, and Other
Professionals Using the open source R language,
you can build powerful statistical models to
answer many of your most challenging
questions. R has traditionally been difficult for

non-statisticians to learn, and most R books
assume far too much knowledge to be of help. R
for Everyone, Second Edition, is the solution.
Drawing on his unsurpassed experience teaching
new users, professional data scientist Jared P.
Lander has written the perfect tutorial for
anyone new to statistical programming and

modeling. Organized to make learning easy and intuitive, this guide focuses on the 20 percent of R functionality you'll need to accomplish 80 percent of modern data tasks. Lander's self-contained chapters start with the absolute basics, offering extensive hands-on practice and sample code. You'll download and install R; navigate and use the R environment; master basic program control, data import, manipulation, and visualization; and walk through several essential tests. Then, building on this foundation, you'll construct several complete models, both linear and nonlinear, and use some data mining techniques. After all this you'll make your code reproducible with LaTeX, RMarkdown, and Shiny. By the time you're done, you won't just know how to write R programs, you'll be ready to tackle the statistical problems you care about most. Coverage includes Explore R, RStudio, and R packages Use R for math: variable types, vectors, calling functions, and more Exploit data structures, including

data.frames, matrices, and lists Read many different types of data Create attractive, intuitive statistical graphics Write user-defined functions Control program flow with if, ifelse, and complex checks Improve program efficiency with group manipulations Combine and reshape multiple datasets Manipulate strings using R's facilities and regular expressions Create normal, binomial, and Poisson probability distributions Build linear, generalized linear, and nonlinear models Program basic statistics: mean, standard deviation, and t-tests Train machine learning models Assess the quality of models and variable selection Prevent overfitting and perform variable selection, using the Elastic Net and Bayesian methods Analyze univariate and multivariate time series data Group data via K-means and hierarchical clustering Prepare reports, slideshows, and web pages with knitr Display interactive data with RMarkdown and htmlwidgets Implement dashboards with Shiny Build reusable R packages with devtools and

Global Trends 2040 - National Intelligence Council 2021-03

"The ongoing COVID-19 pandemic marks the

most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human

life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Understanding Game-based Approaches for Improving Sustainable Water Governance - Wietske Medema 2020-04-28

The sustainable governance of water resources relies on processes of multi-stakeholder collaborations and interactions that facilitate knowledge co-creation and social learning. Governance systems are often fragmented, forming a barrier to adequately addressing the myriad of challenges affecting water resources, including climate change, increased urbanized populations, and pollution. Transitions towards sustainable water governance will likely require innovative learning partnerships between public, private, and civil society stakeholders. It is essential that such partnerships involve vertical and horizontal communication of ideas and

knowledge, and an enabling and democratic environment characterized by informal and open discourse. There is increasing interest in learning-based transitions. Thus far, much scholarly thinking and, to a lesser degree, empirical research has gone into understanding the potential impact of social learning on multi-stakeholder settings. The question of whether such learning can be supported by forms of serious gaming has hardly been asked. This Special Issue critically explores the potential of serious games to support multi-stakeholder social learning and collaborations in the context of water governance. Serious games may involve simulations of real-world events and processes and are challenge players to solve contemporary societal problems; they, therefore, have a purpose beyond entertainment. They offer a largely untapped potential to support social learning and collaboration by facilitating access to and the exchange of knowledge and information, enhancing stakeholder interactions,

empowering a wider audience to participate in decision making, and providing opportunities to test and analyze the outcomes of policies and management solutions. Little is known about how game-based approaches can be used in the context of collaborative water governance to maximize their potential for social learning. While several studies have reported examples of serious games, there is comparably less research about how to assess the impacts of serious games on social learning and transformative change.

Small Business Enterprise - Gavin Reid
2002-09-11

The role of small business enterprise in a mature market economy is one of the major issues in contemporary industrial organization, and is the focus of this book. *Small Business Enterprise* brings new standards of rigour and insight into the study of small firms by importing contemporary ideas from industrial economics and by using up-to-date statistical and econometric techniques. Based on a uniquely rich set of data, *Small Business Enterprise* focuses on the early period after start-up of the small firm. It investigates competitive niches and

how they are established, determinants of growth and profitability, the factors fostering survival, and many other central issues. This core of economic analysis is complemented by an innovative case profile approach, which considers the real behaviour of small firms in a competitive environment; and a section on the political economy of small firms, which looks at the ethics of competition and the enterprise culture.

The Rifle - Andrew Biggio 2021-06-01

It all started because of a rifle. The Rifle is an inspirational story and hero's journey of a 28-year-old U.S. Marine, Andrew Biggio, who returned home from combat in Afghanistan and Iraq, full of questions about the price of war. He found answers from those who survived the costliest war of all -- WWII veterans. It began when Biggio bought a 1945 M1 Garand Rifle, the most common rifle used in WWII, to honor his great uncle, a U.S. Army soldier who died on the hills of the Italian countryside. When Biggio showed the gun to his neighbor, WWII veteran Corporal Joseph Drago, it unlocked memories Drago had kept unspoken for 50 years. On the spur of the moment, Biggio asked Drago to sign the rifle. Thus began this Marine's mission to find as many WWII veterans as he could, get their signatures on the rifle, and document their stories. For two years, Biggio traveled across the country to interview America's last-living WWII veterans. Each time he put the M1 Garand Rifle

in their hands, their eyes lit up with memories triggered by holding the weapon that had been with them every step of the war. With each visit and every story told to Biggio, the veterans signed their names to the rifle. 96 signatures now cover that rifle, each a reminder of the price of war and the courage of our soldiers.

Losing Earth - Nathaniel Rich 2020-03-05

By 1979, we knew all that we know now about the science of climate change - what was happening, why it was happening, and how to stop it. Over the next ten years, we had the very real opportunity to stop it. Obviously, we failed. Nathaniel Rich's groundbreaking account of that failure - and how tantalizingly close we came to signing binding treaties that would have saved us all before the fossil fuels industry and politicians committed to anti-scientific denialism - is already a journalistic blockbuster, a full issue of the New York Times Magazine that has earned favorable comparisons to Rachel Carson's *Silent Spring* and John Hersey's *Hiroshima*. Rich has become an instant, in-demand expert and speaker. A major movie deal is already in place. It is the story, perhaps, that can shift the conversation. In the book *Losing Earth*, Rich is able to provide more of the

context for what did - and didn't - happen in the 1980s and, more important, is able to carry the story fully into the present day and wrestle with what those past failures mean for us in 2019. It is not just an agonizing revelation of historical missed opportunities, but a clear-eyed and eloquent assessment of how we got to now, and what we can and must do before it's truly too late.
