*Psychology and Social Problems (Psychology Revivals)* - Michael Argyle 2014-01-27

First published in 1964, *Psychology and Social Problems* looks at a changing society and research into problems of the time. Many of the themes in the book, such as delinquency, mental health and racial conflict, are still familiar and current topics of discussion today. Social scientists had carried out extensive research into problems of urgent public concern, yet their findings were not widely known or understood and they had often been diffident in advocating policies based on their conclusions. Michael Argyle discussed the recent psychological and social research bearing on the origins of aggression, delinquency, mental disorder, racial and international prejudice, and industrial discontent; he went on to consider the

implications of these studies for prevention and control and for the guidance of social change. This sophisticated and well-documented critique is presented with such lucidity and verve that it will appeal equally to laymen and to students and professional workers and can now be enjoyed in its historical context.

The Calculus of Variations and Functional Analysis - L. P. Lebedev 2003

This volume is aimed at those who are concerned about Chinese medicine - how it works, what its current state is and, most important, how to make full use of it. The audience therefore includes clinicians who want to serve their patients better and patients who are eager to supplement their own conventional treatment. The authors of the book belong to three different fields, modern medicine, Chinese medicine and pharmacology. They provide information from their areas of expertise and concern, attempting to make it comprehensive for users. The approach is macroscopic and philosophical; readers convinced of the philosophy are to seek specific assistance.

**2010 Australian Sky Guide** - Nick Lomb 2009-11

Stories in Stone - Jelle Zeilinga de Boer 2011-05-01

In a series of entertaining essays, geoscientist Jelle Zeilinga de Boer describes how early settlers discovered and exploited Connecticut's natural resources. Their successes as well as failures form the very basis of the state's history: Chatham's gold played a role in the acquisition of its Charter, and Middletown's lead helped the colony gain its freedom during the Revolution. Fertile soils in the Central Valley fueled the state's development into an agricultural power house, and iron ores discovered in the western highlands helped trigger its manufacturing eminence. The Statue of Liberty, a quintessential symbol of America, rests on Connecticut's Stony Creek granite. Geology not only shaped the state's physical landscape, but also provided an economic base and played a cultural role by inspiring folklore, paintings, and poems. Illuminated by 50 illustrations and 12 color plates, *Stories in Stone* describes the marvel of Connecticut's geologic diversity and also recounts the impact of past climates, earthquakes, and meteorites on the lives of the people who made Connecticut their home.

*On Writing with Photography* - Karen Beckman  
2013-02-01

From James Agee to W. G. Sebald, there has been an explosion of modern documentary narratives and fiction combining text and photography in complex and fascinating ways. However, these contemporary experiments are part of a tradition that stretches back to the early years of photography. Writers have been integrating photographs into their work for as long as photographs have existed, producing rich, multilayered creations; and photographers have always made images that incorporate, respond to, or function as writing. *On Writing with Photography* explores what happens to texts—and images—when they are brought together. From the mid-nineteenth century to the present, this collection addresses a wide range of genres and media, including graphic novels, children's books, photo-essays, films, diaries, newspapers, and art installations. Examining the works of Herman Melville, Don DeLillo, Claude McKay, Man Ray, Dare Wright, Guy Debord, Zhang Ailing, and Roland Barthes, among others, the essays trace the relationship between photographs and "reality" and describe the imaginary worlds constructed by both, discussing how this production can turn into testimony of personal and collective history, memory and trauma, gender and sexuality, and ethnicity. Together, these essays help explain how writers and photographers—past and present—have served as powerful creative resources for each other. Contributors: Stuart Burrows, Brown U; Roderick Coover, Temple U; Adrian Daub, Stanford U; Marcy J. Dinius, DePaul U; Marianne Hirsch, Columbia U; Daniel H. Magilow, U of Tennessee, Knoxville; Janine Mileaf; Tyrus Miller, U of California, Santa Cruz; Leah Rosenberg, U of Florida; Xiaojue Wang, U of Pennsylvania.

**How to Worry Less About Money** - John Armstrong 2012-05-10

Our relationship with money is one that lasts a lifetime, yet traditionally books on the subject tend to take one of two routes: a) how to get more, or b) how to deal with less. John Armstrong turns these approaches upside down, and looks not at money itself, but at how we relate to it and the meaning we attach to it. How does it drive us and frighten us? Can it change the world for the better? And how much do we actually need? Offering surprising and helpful new insights, this book will encourage you to redefine your feelings about money, and ultimately enable you to discover what is really important to you in life. One in the new series of books from The School of Life, launched May 2012: *How to Stay Sane* by Philippa Perry *How to Find Fulfilling Work* by Roman Krznaric *How to Worry Less About Money* by John Armstrong *How to Change the World* by John-Paul Flintoff *How to Thrive in the Digital Age* by Tom Chatfield *How to Think More About Sex* by Alain de Botton

*Military Aspects of Hydrogeology* - Edward P. F. Rose 2012

This book contains 20 papers from authors in the UK, USA, Germany and Austria. Historically, it gives examples of the influence of groundwater on battlefield tactics and fortress construction; describes how groundwater was developed for water supply and overcome as an obstacle to military engineering and cross-country vehicular movement by both sides in World Wars I and II; and culminates with examples of the application of hydrogeology to site boreholes in recent conflicts, notably in Afghanistan. Examples of current research described include hydrological model development; the impact of variations in soil moisture on explosive threat detection and cross-country vehicle mobility; contamination arising from defence sites and its remediation; privatization of water supplies; and the equitable allocation of resources derived from an international transboundary aquifer.

Re-Figuring Theology - Stephen H. Webb  
1991-07-03

Here is a rhetorical treatment of Karl Barth's early theology. Although scholars have long noted the rhetorical power of Barth's work, calling it volcanic and explosive, this book uses rhetoric to illuminate the peculiar nature of his prose. It displays a Barth whose prose is radically unstable and inseparable from his theological arguments. The author connects Barth's early theology to the Expressionism of

the Weimar Republic. He develops an original theory of figures of speech, relying on the philosophies of Paul Ricoeur and Hayden White, to delve more deeply into the particular configurations of Barth's writings. Nietzsche's hyperbole and Kierkegaard's irony are examined as rhetorical precedents of Barth's style. The closing chapter surveys Barth's later, realistic theology and then suggests ways in which his earlier tropes, especially the figures of excess and self-negation, can serve to enable theology to speak today.

**Today's Technician** - Chris Hadfield 2009-07-26

**Automating Science and Engineering Laboratories with Visual Basic** - Mark F. Russo 1999-03-31

A Volume in the Wiley-Interscience Series on Laboratory Automation. The complete, step-by-step guide to using Visual Basic(r) in a laboratory setting Visual Basic(r) is fast becoming the de facto laboratory programming language, yet existing books typically discuss applications that have nothing to do with science and engineering. This primer fills the gap in the field, showing professionals seeking to improve the productivity of their laboratories how to use Visual Basic(r) to automate laboratory processes. Automating Science and Engineering Laboratories with Visual Basic(r) helps laboratory professionals decide when and if to use Visual Basic(r) and how to combine it with the many computing technologies used in modern laboratories such as RS-232 port

communications, TCP/IP networking, and event-driven control, to name a few. With an emphasis on getting readers programming immediately, the book provides clear guidelines to the appropriate programming techniques as well as custom-developed software tools. Readers will learn how to build applications to control laboratory instruments, collect and process experimental data, create interactive graphical

applications, and more. Boasting many working examples with the complete source code and backward compatibility to previous versions of Visual Basic(r), Automating Science and Engineering Laboratories with Visual Basic(r) is an indispensable teaching tool for nonprogrammers and a useful reference for more experienced practitioners.
