Psychology in Everyday Life - David G. Myers 2011-02-18

Concepts of Biology - Samantha Fowler 2018-01-07

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Climate Change Biology - 2011

Climate change has moved from being a contested phenomenon to the top of the agenda at global summits. Climate Change Biology is the first major textbook to address the critical issue of how climate change may affect life on the planet, and particularly its impact on human populations. Presented in four parts, the first deals extensively with the physical evidence of climate change and various modelling efforts to predict its future. Biological responses are addressed in the second part, from the individual's physiology to populations and ecosystems, and further to considering adaptation and evolution. The third part examines the specific impact climate change may have on natural resources, agriculture and forestry. The final part considers research on the cutting edge of impact prediction and the practical and philosophical limitations on our abilities to predict these impacts. This text will be a useful asset to the growing number of both undergraduate and graduate courses on impacts of climate change, as well as providing a succinct overview for researchers new to the field.

Inside, you'll get the practice you need to master biology with problem-solving tools such as Clear, concise reviews of every topic Practice problems in every chapter—with explanations and solutions A diagnostic pretest to assess your current skills A full-length exam that adapts to your skill level Easy-to-understand tables and graphs, clear diagrams, and straightforward language can help you gain a solid foundation in biology and open the doors to more advanced knowledge. This workbook begins with the basics: the scientific method, microscopes and microscope measurements, the major life functions, cell structure, classification of biodiversity, and a chemistry review. You'll then dive into topics such as Plant biology: Structure and function of plants, leaves, stems, roots; photosynthesis Human biology: Nutrition and digestion, circulation, respiration, excretion, locomotion, regulation Animal biology: Animal-like protists; phyla Cnidaria, Annelida, and Arthropoda Reproduction: Organisms, plants, and human Mendelian Genetics; Patterns of Inheritance; Modern Genetics Evolution: Fossils, comparative anatomy and biochemistry, The hardy-Weinberg Law Ecology: Abiotic and biotic factors, energy flow, material cycles, biomes, environmental protection Practice makes

perfect—and whether you're taking lessons or teaching yourself, CliffsStudySolver guides can help you make the grade. Author Max Rechtman taught high school biology in the New York City public school system for 34 years before retiring in 2003. Biological Psychology - Stephen B. Klein 2006-10-03

This is a comprehensive and up-to-date presentation of the processes by which biological systems, most notably the nervous system, affect behaviour. A fantastic art program, an applauded accessible writing style and a host of pedagogical features make the text relevant to the lives of the students taking biological psychology.

An Introduction to Methods and Models in Ecology, Evolution, and Conservation Biology - Stanton Braude 2010-01-04

An innovative introduction to ecology and evolution This unique textbook introduces undergraduate students to quantitative models and methods in ecology, behavioral ecology, evolutionary biology, and conservation. It explores the core concepts shared by these related fields using tools and practical skills such as experimental design, generating phylogenies, basic statistical inference, and persuasive grant writing. And contributors use examples from their own cutting-edge research, providing diverse views to engage students and broaden their understanding. This is the only textbook on the subject featuring a collaborative "active learning" approach that emphasizes hands-on learning. Every chapter has exercises that enable students to work directly with the material at their own pace and in small groups. Each problem includes data presented in a rich array of formats, which students use to answer questions that illustrate patterns, principles, and methods. Topics range from Hardy-Weinberg equilibrium and population effective size to optimal foraging and indices of biodiversity. The book also includes a comprehensive glossary. In addition to the editors, the contributors are James Beck, Cawas Behram Engineer, John Gaskin, Luke Harmon, Jon Hess, Jason Kolbe, Kenneth H. Kozak, Robert J. Robertson, Emily Silverman, Beth Sparks-Jackson, and Anton Weisstein. Provides experience with hypothesis testing, experimental design, and scientific reasoning Covers core quantitative models and methods in ecology, behavioral ecology, evolutionary biology, and conservation Turns "discussion sections" into "thinking labs" Professors: A supplementary Instructor's Manual is available for this book. It is restricted to teachers using the text in courses. For information on how to obtain a copy, refer to:
