Media and the Ecological Crisis
- Richard Maxwell 2014-10-03

Media and the Ecological Crisis is a collaborative work of interdisciplinary writers engaged in mapping, understanding and addressing the complex contribution of media to the current ecological crisis. The book is informed by a fusion of scholarly, practitioner, and activist interests to inform, educate, and advocate for real, environmentally sound changes in design, policy, industrial, and consumer practices. Aligned with an emerging area of scholarship devoted to identifying and analysing the material physical links of media technologies, cultural production, and environment, it contributes to the project of greening media studies by raising awareness of media technology's concrete environmental effects.

**Flexible Automation in
Japan - J. Hartley 2013-04-09**
Much has been said and
written about Japan's
manufacturing prowess. Most
of the comment comes from
people who are merely visitors
to the country and can be best
classified as 'observers looking
in from the outside'. Other
views come from the Japanese

themselves in which the double
barrier of culture and language
filters out much information
that would be of real value to
Western industrialists. Neither
of these limitations apply to
John Hartley, who has been
resident in Japan for the past
five years. He understands the
culture, can speak the
language and has extensive
contacts at the highest level.
Therefore, he is in a unique
position to report on the
Japanese scene and its
activities in advanced
manufacturing technology. This
he has been doing on a regular
basis to IFS magazines: The
Industrial Robot, Assembly
Automation, Sensor Review
and The FMS Magazine. Most
of the material in this book is
from John Hartley's 'pen' and
represents his most significant
contributions on flexible
automation in Japan to these
journals over the last three
years. It is augmented with a
few other articles written by
leading authorities on new
technology in Japanese
manufacturing industry.

Japan on the Upswing - Yoshiyuki Iwamoto 2006
Japan's effervescent economy, charging ahead in the late

1980s under the stimulation of a 2.5% prime rate, shook American confidence...until the bubble burst in 1989, leaving banks saddled with over \$200 billion in bad loans. Iwamoto shows how and why the lenders racked up all this uncollectible debt, who took advantage of whom, and how actions by business and government officials contributed to the crisis. Along the way, his illustrative examples share some of the flavor of business life in Japan including the academic cliques and mobster clans, the after-hours camaraderie, and the legendary "entertainment" that was used to evade inspections by the Ministry of Finance. The author then describes Prime Minister Kozumi's initiatives that halved the bad loans by March 2005 and inspired foreign investors to bring back their cash. With strong exports, increasing capital investment, and decreasing unemployment, Japan is truly on the upswing. Kozumi's party reaped the benefit with a landslide victory in the September 2005 general

election, and he continues to push for further restructuring. The author goes on to identify and describe the 20 most successful companies in Japan this year and gives clues as to what makes them thrive. Many aspects of Japan's economy are highlighted in tables and statistics, from "Differences in Pay Scale by Type of Industry" to "Results at Seven Mega Banking Groups and Forecast for March 31, 2006," plus balance sheets of companies like Toyota, Shiseido, and McDonald's Japan. * The author is a US-educated Japanese businessman who has had a lengthy career in marketing and advertising for US firms doing business in Japan and for Japanese companies doing business abroad. His own company, MarBrain, applies an understanding of cultural differences to provide marketing plans and creative problem solving for small companies engaged in international business. Robotic Welding, Intelligence and Automation - Tzyh-Jong

Tarn 2015-07-15

The primary aim of this volume is to provide researchers and engineers from both academic and industry with up-to-date coverage of new results in the field of robotic welding, intelligent systems and automation. The book is mainly based on papers selected from the 2014 International Conference on Robotic Welding, Intelligence and Automation (RWIA'2014), held Oct. 25-27, 2014, at Shanghai, China. The articles show that the intelligentized welding manufacturing (IWM) is becoming an inevitable trend with the intelligentized robotic welding as the key technology. The volume is divided into four logical parts: Intelligent Techniques for Robotic Welding, Sensing of Arc Welding Processing, Modeling and Intelligent Control of Welding Processing, as well as Intelligent Control and its Applications in Engineering. *CAD/CAM, Robotics, and Factories of the Future* - Raj Gill 1996
