This first introductory-level textbook on the design of small molecules is written with the first-time user in mind. Aimed at students and scientists alike, it uses computer-based methods to design and analyze such small molecules as drugs, enzyme inhibitors, probes and markers for biomolecules. Both authors have extensive practical experience of modeling and design and share their knowledge of what can and cannot be done with computer-assisted design. Divided into four sections, the book begins with a look at molecular objects and design objectives, including molecular geometry, properties, recognition and dynamics. Two further sections deal with virtual synthesis and screening, while the final section covers navigation in chemical space. The result is a textbook that takes the modeler one step further, to the de novo design of functional molecules. With its study questions at the end of each learning

unit, this is equally suitable for teaching and self-learning.

**The Poetry of Religious Sorrow in Early Modern England** - Gary Kuchar 2011-03-03

In early modern England, religious sorrow was seen as a form of spiritual dialogue between the soul and God, expressing how divine grace

operates at the level of human emotion. Through close readings of both Protestant and Catholic poetry, Kuchar explains how the discourses of 'devout melancholy' helped generate some of the most engaging religious verse of the period. From Robert Southwell to John Milton, from Aemilia Lanyer to John Donne, the language of 'holy mourning' informed how poets represented the most intimate and enigmatic aspects of faith as lived experience. In turn, 'holy mourning' served as a way of registering some of the most pressing theological issues of the day. By tracing poetic representations of religious sorrow from Crashaw's devotional verse to Shakespeare's weeping kings, Kuchar expands our understanding of the interconnections between poetry, theology and emotion in post-Reformation England.

**Jung, Deleuze, and the Problematic Whole** - Roderick Main  
2020-09-02

This book of expert essays explores the concept of the whole as it operates within the psychology of Jung, the philosophy of Deleuze, and selected areas of wider twentieth-century Western culture, which provided the context within which these two seminal thinkers worked. Addressing this topic from a variety of perspectives and disciplines and with an eye to contemporary social, political, and environmental crises, the contributors aim to clarify some of the epistemological and ethical issues surrounding attempts, such as those of Jung and Deleuze, to think in terms of the whole, whether the whole in question is a particular bounded system (such as an organism, person, society, or ecosystem) or, most broadly, reality as a whole. Jung, Deleuze, and the Problematic Whole will contribute to enhancing critical self-reflection among the many contemporary theorists and practitioners in whose work thinking in terms of the whole plays a significant role.
