Komodo Dragons - James B. Murphy 2015-03-31

More than twenty years have passed since Walter Auffenberg's monumental *The Behavioral Ecology of the Komodo Monitor*. In the intervening years the populations of Komodo dragons—native only to a handful of islands in southeast Indonesia—have dwindled, sparking intensive conservation efforts. During the last two decades new information about these formidable predators has emerged, and the most important findings are clearly presented here. A memoir from Walter Auffenberg and his son Kurt is followed by the latest information on Komodo dragon biology, ecology, population distribution, and behavior. The second part of the book is dedicated to step-by-step management and conservation techniques, both for wild and captive dragons. This successful model is a useful template for the conservation of other endangered species as well, for, as Kurt and Walter Auffenberg note, “The species may well indeed survive in the wild for generations to come while countless other organisms are lost.”

*Theoretical Studies of Important Processes in Planetary and Comet Atmospheres. Renewel Request* - National Aeronautics and Space Adm Nasa 2018-10-18

Current efforts have focused on the dissociative recombination (DR) of  $O_2^+$ , a process of great importance in planetary atmospheres. This process is difficult to study experimentally because of the need to determine the dependence of the product electronic states and kinetic energies upon the vibrational distribution of the ion and electron temperature. The knowledge of these characteristics of DR is needed to accurately model planetary ionospheres. Using a theoretical quantum chemical approach, the generation of  $O(1S)$  from DR was studied in detail. Guberman, Steven L. Unspecified Center AF-AFOSR-0109-84; NCC2-308; NAGW-1404
