Academic Freedom and Precarity in the Global North - Asli Vatansever 2022-10-21

With contributions from six leading scientific countries of the Global North and from the general European Higher Education Area, this book questions the predominant view on academic freedom and pleads for a holistic approach. While academic freedom has been a top agenda point for the global scientific community in recent years, the public and academic discourse has often been marked by a negative interpretation of the term understood merely as exemption from state intervention and censorship. The contributions in this edited volume demonstrate, however, that this is not where the story ends: the ability to exercise academic freedom not only involves the freedom of expression in its abstract sense but should involve the capability to determine research agendas and curricula independently from market pressures or threats of career sabotage, and to resist workplace misconduct without fear of losing future career chances. Providing a differentiated picture of

contemporary structural limits to academic freedom in advanced democracies, this volume will be of great interest for not only scholars of higher education, but for the entire academic community.

Economics can be a lens for understanding the behavior of schools, districts, states, and nations in meeting education needs of their populaces, as well as for understanding the individual decisions made by administrators, teachers, and students. Insights from economics help decision makers at the state level understand how to raise and distribute funds for public schools in an equitable manner for both schools and taxpayers. Economics also can assist researchers in analyzing effects of school spending and teacher compensation on student outcomes. And economics can provide important insights into public debates on issues

such as whether to offer vouchers for subsidizing student attendance at private schools. This two-volume encyclopedia contains over 300 entries by experts in the field that cover these issues and more. Part of SAGE's Mastering Business Research Methods series, conceived and edited by Bill Lee, Mark N. K. Saunders and Vadake K. Narayanan, the series is designed to support business and management students with their research-based dissertations by providing in-depth and practical guidance on using a chosen method of data collection or analysis. The books are written in a concise and accessible way, and contain a range of features, including checklists and a glossary, designed to support self-guided research. They also demonstrate the flexibility that case designs offer, and challenges the myths surrounding this approach. Ideal for Business and Management students reading for a Master's degree, each book in the series may also serve as reference books for doctoral students and faculty members interested in the method.
