Zika Virus: What Have We Learnt Since the Start of the Recent Epidemic? - Rubén Bueno-Marí 2018-04-12

The considerable number of viral infectious disease threats that have emerged since the beginning of the 21st century have shown the need to dispose global and coordinated responses to fight properly and efficiently against them. Severe acute respiratory

syndrome (2003), avian influenza in humans (2005), A(H1N1) pandemic influenza (2009), Middle East respiratory syndrome coronavirus (MERS-CoV) (2012 onward) and Ebola virus disease (2014-2015) are some of the most important examples. The latest emerging and devastating threat was Zika virus, an arbovirus that provoked more than 500,000 suspicious cases in the Americas in 2016 and notable processes of social and medical alarms due to the evidence of a causal link between Zika virus and several congenital injuries, like microcephaly, as well as due to its association with neurological disorders such as Guillain-Barré syndrome in adults (PAHO, 2017). In the framework of this global response and multistrategic approach, the purpose of this Research Topic is to provide updated information and novel researches about control strategies, encompassing virological, entomological and epidemiological data, in order to reach the triad of protagonists of transmission cycles (virus, mosquitoes and humans).

Big Data in Predictive Toxicology - Andrea-Nicole Richarz 2019-12-10

The rate at which toxicological data is generated is continually becoming more rapid and the volume of data generated is growing dramatically. This is due in part to advances in software solutions and cheminformatics approaches which increase the availability of open data from chemical, biological and toxicological and high throughput screening resources. However, the amplified pace and capacity of data generation achieved by these novel techniques presents challenges for organising and analysing data output. Big Data in Predictive Toxicology discusses these challenges as well as the opportunities of new techniques encountered in data science. It addresses the nature of toxicological big data, their storage, analysis and interpretation. It also details how these data can be applied in toxicity prediction, modelling and risk assessment. This title is of particular relevance to researchers and postgraduates working and studying in the fields of computational methods, applied and physical chemistry, cheminformatics, biological sciences, predictive toxicology and safety and hazard assessment.

Pain Management and the Opioid Epidemic

- National Academies of Sciences, Engineering, and Medicine 2017-09-28

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

Public Policy in the 'Asian Century' - Sara Bice 2017-12-16

This volume explores the defining features, critical approaches, challenges and opportunities for public policy in the 'Asian Century'. This is the first book to systematically analyse the key institutions and practices that comprise public policy, administration and governance to investigate how they are changing in the context of increasing Asian influence. Its authors argue that the Asian Century holds the potential to generate a paradigm shift equivalent to the impacts of neo-liberalism and the New Public Management of the late 20th century. Divided into three parts, this volume interrogates the theories underpinning contemporary public policy; explores case studies from different policy arenas across the Asian region; and imagines what a future of globalised public policy might look like. It examines the implementation

measures necessary to support policy and administration in an era of transnational governance networks, tightly linked economic markets and progressively fluid cultural exchanges. This book provides the concepts and tools necessary to navigate these shifting sands successfully. It is essential reading for scholars of public policy, public management, international relations, and politics and social sciences, as well as for administrators and public servants.

Rethinking Readiness - Jeffrey Schlegelmilch
2020-07-14

As human society continues to develop, we have increased the risk of large-scale disasters. From health care to infrastructure to national security, systems designed to keep us safe have also heightened the potential for catastrophe. The constant pressure of climate change, geopolitical conflict, and our tendency to ignore what is hard to grasp exacerbates potential dangers. How can we prepare for and prevent the twenty-first-century disasters on the horizon? *Rethinking Readiness* offers an expert introduction to human-made threats and vulnerabilities, with a focus on opportunities to reimagine how we approach disaster preparedness. Jeff Schlegelmilch identifies and explores the most critical threats facing the world today, detailing the dangers of pandemics, climate change, infrastructure collapse, cyberattacks, and nuclear conflict. Drawing on the latest research from leading experts, he provides an accessible overview of the causes and potential effects of these looming megadisasters. The book highlights the potential for building resilient, adaptable, and sustainable systems so that we can be better prepared to respond to and recover from future crises. Thoroughly grounded in scientific and policy expertise, *Rethinking Readiness* is an essential guide to this century's biggest challenges in disaster management.

Report of the United States Board Appointed to Test Iron, Steel and Other Metals - United States. Board for testing iron, steel, and other metals 1905

Beyond Deportation - Shoba Sivaprasad Wadhia
2015-06-02

The first book to comprehensively describe the history, theory, and application of prosecutorial discretion in immigration law. When Beatles star John Lennon faced deportation from the U.S. in the 1970s, his lawyer Leon Wildes made a groundbreaking argument. He argued that Lennon should be granted "nonpriority" status pursuant to INS's (now DHS's) policy of prosecutorial discretion. In U.S. immigration

law, the agency exercises prosecutorial discretion favorably when it refrains from enforcing the full scope of immigration law. A prosecutorial discretion grant is important to an agency seeking to focus its priorities on the "truly dangerous" in order to conserve resources and to bring compassion into immigration enforcement. The Lennon case marked the first moment that the immigration agency's prosecutorial discretion policy became public knowledge. Today, the concept of prosecutorial discretion is more widely known in light of the Obama Administration's Deferred Action for Childhood Arrivals or DACA program, a record number of deportations and a stalemate in Congress to move immigration reform. *Beyond Deportation* is the first book to comprehensively describe the history, theory, and application of prosecutorial discretion in immigration law. It provides a rich history of the role of prosecutorial discretion in the immigration system and unveils the powerful role it plays in protecting individuals from deportation and saving the government resources. Shoba Sivaprasad Wadhia draws on her years of experience as an immigration attorney, policy leader, and law professor to advocate for a bolder standard on prosecutorial discretion, greater mechanisms for accountability when such standards are ignored, improved transparency about the cases involving prosecutorial discretion, and recognition of "deferred action" in the law as a formal benefit.

Sleep Disorders and Sleep Deprivation - Institute of Medicine 2006-10-13

Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients—sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems. *1962 Census of Governments: Local government in metropolitan areas* - United States. An Artist of the Floating World - Kazuo Ishiguro 2012-09-05

From the winner of the Nobel Prize in Literature and author of the Booker Prize-winning novel *The Remains of the Day* In the face of the misery in his homeland, the artist Masuji Ono was unwilling to devote his art solely to the celebration of physical beauty. Instead, he put his work in the service of the imperialist movement that led Japan into World War II. Now, as the mature Ono struggles through the aftermath of that war, his memories of his youth and of the "floating world"—the nocturnal world of pleasure, entertainment, and drink—offer him both escape and redemption, even as they punish him for betraying his early promise. Indicted by society for its defeat and reviled for his past aesthetics, he relives the passage through his personal history that makes him both a hero and a coward but, above all, a human being.

The Education Invasion - Joy Pullmann 2017-03-14

Most Americans had no idea what Common Core was in 2013, according to polls. But it had been creeping into schools nationwide over the previous three years, and children were feeling its effects. They cried over math homework so mystifying their parents could not help them, even in elementary school. They read motley assortments of "informational text" instead of classic literature. They dreaded the high-stakes tests, in unfamiliar formats, that were increasingly controlling their classrooms. How did this latest and most sweeping "reform" of American education come in mostly under the radar? Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers, and it led to a big tangle of history and politics, intrigue and arrogance. She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K-12 classes, and how the Obama administration pressured states to adopt them. Thus a federalized education scheme took root, despite legal prohibitions against federal involvement in curriculum. Common Core and its testing regime were touted as "an absolute game-changer in public education," yet the evidence so far suggests that kids are actually

learning less under it. Why, then, was such a costly and disruptive agenda imposed on the nation's schools? Who benefits? And how can citizens regain local self-governance in education, so their children's minds will be fed a more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats? The Education Invasion offers answers and remedies.
