Microeconomics - Robert B. Ekelund 2000

The Regulation of Monopoly - Roger Sherman 1989-03-31

Competition may not function well where technology calls for large and complex investments, as in the electricity industry where public utilities often provide service. This book presents economic welfare foundations for the purpose of evaluating how well, from a social point of view, an enterprise performs when competition is unable to function. Problems with existing institutions are emphasized. Topics treated include welfare measures and their uses in peak-load pricing, second-best pricing, and income distribution. Professor Sherman covers public choice difficulties of government intervention, and describes problems with incentives in statutory monopolies and efforts to overcome them through the study of principal-agent relationships. Contestability and sustainable prices are also discussed, as well as effects of uncertainty and imperfect

information.

Natural Monopoly Regulation - Sanford V. Berg 1989-01-27

Considered the cutting edge of microeconomic theory in the 1970s, natural monopoly research remains an active and fertile field. Policy makers and regulators have begun to implement entry and pricing policies that are based on theoretical and empirical analyses. This book develops a comprehensive framework for analyzing natural monopoly. The authors first present a historical overview of regulatory economics, followed by analyses of optimal pricing and investment for single- and multiproduct natural monopolies. Topics covered include cost and demand structures, efficiency impacts of linear and multipart pricing, peak-load pricing, capacity determination, and the sustainability of natural monopolies. After a survey and analysis of natural monopoly regulation in practice, the links between technological change and regulation are identified. The book concludes with a discussion of the

alternatives to traditional regulation, including public ownership, franchise schemes, quality regulation, and new incentive systems. Throughout the book, issues from the telecommunications and energy industries are used to illustrate key points. Its integrated framework will make it useful to academic economists, regulatory analysts, business researchers, and advanced students of public utility economics.

In Defense of Monopoly - Richard B. McKenzie 2019-02-28

In Defense of Monopoly offers an unconventional but empirically grounded argument in favor of market monopolies. Authors McKenzie and Lee claim that conventional, static models exaggerate the harm done by real-world monopolies, and they show why some degree of monopoly presence is necessary to maximize the improvement of human welfare over time. Inspired by Joseph Schumpeter's suggestion that market imperfections can drive an economy's long-term progress, In Defense of Monopoly defies conventional assumptions to show readers why an economic system's failure to efficiently allocate its resources is actually a necessary precondition for maximizing the system's long-term performance: the perfectly fluid, competitive economy idealized by most economists is decidedly inferior to one characterized by market entry and exit restrictions or costs. An economy is not a board game in which players compete for a limited number of properties, nor is it much like the kind of blackboard games that economists use to develop their monopoly models. As McKenzie and Lee demonstrate, the creation of goods and services in the real world requires not only competition but the prospect of gains beyond a normal competitive rate of return.

Manufacturing Consent - Michael Burawoy 2012-10-15

Since the 1930s, industrial sociologists have tried to answer the question, Why do workers not work harder? Michael Burawoy spent ten months as a machine operator in a Chicago factory trying to answer different but equally important questions: Why do workers work as hard as they do? Why do workers routinely consent to their own exploitation? Manufacturing Consent, the result of Burawoy's research, combines rich ethnographical description with an original Marxist theory of the capitalist labor process. Manufacturing Consent is unique among studies of this kind because Burawoy has been able to analyze his own experiences in relation to those of Donald Roy, who studied the same factory thirty years earlier. Burawoy traces the technical, political, and ideological changes in factory life to the transformations of the market relations of the plant (it is now part of a multinational corporation) and to broader movements, since World War II, in industrial relations.
