Financial Accounting - Robert Libby 2016-01-15

Libby/Libby/Hodge wrote this text based on their belief that the subject of financial accounting is inherently interesting, but financial accounting textbooks are often not. They believe most financial accounting textbooks fail to demonstrate that accounting is an exciting field of study and one that is important to future careers in business. When writing this text, they considered career relevance as their guide when selecting material, and the need to engage the student as their guide to style, pedagogy, and

design. Libby/Libby/Hodge successfully implements a real-world, single focus company approach in every chapter. Students and instructors have responded very favorably to the use of focus companies and the real-world financial statements. The companies chosen are engaging and the decision-making focus shows the relevance of financial accounting regardless of whether or not the student has chosen to major in accounting. Libby/Libby/Hodge believes in the building-block approach to teaching transaction analysis. Most faculty agree that mastery of the accounting cycle is critical to success in financial accounting. And yet all other financial books introduce and develop transaction analysis in one chapter, bombarding a student early in the course with an overload of new concepts and terms. The authors believe that most faculty take more time with the accounting cycle, but other financial accounting textbooks don't. By slowing down the introduction of

transactions and giving students time to practice and gain mastery, this building-block approach leads to greater student success in their study of later topics in financial accounting such as adjusting entries.

Transnational Accounting -

Dieter Ordelleide 2016-02-17

Considerable effort has been made over the last ten years by such institutions as the EU, OECD, UNO and the IASC towards the harmonisation of accounting standards. It is recognised though that uniformity and true compatibility of financial instruments cannot be achieved while accounting operates in individual national economic and legal environments. A knowledge of national accounting standards and practice continues to be indispensable for the analysis of financial statements.

Transnational Accounting is a unique comparative study of accounting standards of fourteen major economic powers, plus the regimes of the IASC and EU. Each chapter is
