River of Forgotten Days - Daniel Spurr 2015-04-07

A poignant voyage of discovery down the great Mississippi. Praised by such authors as John Barth, and George V. Higgins, Dan Spurr's gently powerful memoir, *Steered by the Falling Stars*, captured the hearts of readers with its story of death, rebirth, and redemption and its evocative description of life under sail. Now, Spurr takes us on another adventure, a voyage into not only the heartland of contemporary America but also back into the rough and ready days of exploration and discovery 250 years ago. Following the trail of the enigmatic French explorer Rene de La Salle, Spurr takes his seven-year-old son Steve and his grown daughter Adriana down the Mississippi from Chicago to New Orleans in the rundown, underpowered Belle. Throughout the journey, the juxtaposition of modern America on the river's banks and the untamed wilds of La Salle's day, as revealed through journals and historical documents, illuminates the changes in the land and its people over the intervening centuries. The inexorable flow of Spurr's clean and honest prose mirrors that of this greatest of American rivers. The voices of the river's denizens and the keen observations of the author's young and wide-eyed shipmates take us deep into the heart of an ever-changing American landscape.

Review of the U.S. Department of Energy's Heavy Vehicle Technologies Program - National Research Council 2000-12-01

As national priorities have been focused both on reducing fuel consumption and improving air quality, attention has increased on reducing emissions from many types of vehicles, including light-duty, medium-duty, and heavy-duty diesel-powered vehicles. Meeting the recently promulgated (and proposed) emission standards and simultaneously increasing fuel economy will pose especially difficult challenges for diesel-powered vehicles and will require the development of new emission-reduction technologies. In response to a request from

the director of OHVT, the National Research Council formed the Committee on Review of DOE's Office of Heavy Vehicle Technologies to conduct a broad, independent review of its research and development (R&D) activities.

Punks in Peoria - Jonathan Wright 2021-06-15

Punk rock culture in a preeminently average town Synonymous with American mediocrity, Peoria was fertile ground for the boredom- and anger-fueled fury of punk rock. Jonathan Wright and Dawson Barrett explore the do-it-yourself scene built by Peoria punks, performers, and scenesters in the 1980s and 1990s. From fanzines to indie record shops to renting the VFW hall for an all-ages show, Peoria's punk culture reflected the movement elsewhere, but the city's conservatism and industrial decline offered a richer-than-usual target environment for rebellion. Eyewitness accounts take readers into hangouts and long-lost venues, while interviews with the people who were there trace the ever-

changing scene and varied fortunes of local legends like Caustic Defiance, Dollface, and Planes Mistaken for Stars. What emerges is a sympathetic portrait of a youth culture in search of entertainment but just as hungry for community—the shared sense of otherness that, even for one night only, could unite outsiders and discontents under the banner of music. A raucous look at a small-city underground, Punks in Peoria takes readers off the beaten track to reveal the punk rock life as lived in Anytown, U.S.A.

Cheap Outboards - Max Wawrzyniak III 2006-06-01

* Outboard motor repair for the average guy * Fix up an old outboard and SAVE \$1000 or more compared to buying a new motor! With a little know-how and a few common tools, you can fix an old motor—bring it back from the dead. Sometimes all it takes is a squirt of WD-40 into the cylinder and a new spark plug. Or a new set of points and condensers—which do not require expert knowledge or black magic to install. Maybe the carburetor needs cleaning and adjusting. You can do it! Max E. Wawrzyniak III is an outboard motor guru. He advises you to find an old motor at a yard sale for \$100 or so (and he tells you exactly which ones to look for), and fix it up—rather than spending \$1500 or more on a new motor. He is a big fan of “cheap power.” Get on the water with money left in your pocket. With a basic understanding of how these motors work, a little logical thinking, and a few hours’ work, you can go boating for a fraction of what everyone else has to pay. Also—for the

boater who already owns an outboard motor of any age—this book demystifies these internal-combustion marvels that can bring such frustration if they malfunction. You’ll learn how they work, and the simple things you can do to keep them running forever. What Max teaches are not only money-saving skills, but can also be life-saving, as you will no longer be helpless in the face of engine trouble on the water. His clear instructions and over one hundred color photographs will make anyone into a capable outboard mechanic. INCLUDES: What to Buy, Where to Find It, Tools Needed and Where to Begin, The Ignition System, Carburetors, Water Pump Repairs, Recoil Starters, Fuel Tanks, Propellers, Lower Units, Emergency Shut-Down, Fuel Pump Conversion, Remote Controls: Shift and Throttle, Remote Control: Steering, Tiller Conversion, Trouble-Shooting, and Onboard Spares and Tools.
